

## AI-Hub Standalone Machine Learning Software

N-Intelligence AI-Hub simplifies the development of deep-learning models

Nordson Intelligence provides users the autonomy to enhance their inspection results, and quickly deploy solutions for different types of applications. The AI-Hub workflow guides you through preparing data, building models, evaluating performance, running predictions, and deploying models.

Nordson AI-Hub supports ATS team for feasibility study, fine turning model, deployment, and scale AI solutions across our product lines software.

## Enhance Inspection Results

Nordson AI-Hub simplifies the development of deep-learning models that combine the judgment of human experts with the consistency of automation.

Users can upload inspection images, define classes, label samples, train models, and evaluate performance — all in one guided workflow optimized for visual inspection applications.

By creating accurate ground truth labels, AI-Hub enables the AI model to distinguish components, detect features, and classify or segment defects with precision.

The result: faster project setup, higher inspection accuracy, and improved process repeatability and yield.

## Model Fine-Tuning and Continuous Improvement

Nordson AI-Hub supports continuous improvement through local fine-tuning.

As new inspection data is collected, users can update their datasets and retrain models to adapt to evolving products, materials, or process conditions.

This data-centric approach ensures that models stay robust and accurate over time while maintaining all data securely within the factory network.

With Nordson AI-Hub, customers retain full control over their data and models.

## Deployment and License Control

Models are securely encrypted and registered to the Nordson deployment server.

Both the AI-Hub software and trained models are license-controlled to ensure authorized use, version traceability, and data protection.

Deployment integrates directly with Nordson inspection systems, delivering reliable and consistent AI performance.
