

Solutions for Speaker Assembly

How to improve speaker quality, speed up throughput and get even fewer rejects

752 diaphragm valve dispensing adhesive bead on loudspeaker components.

Nordson EFD Dispense Valve Systems for precise deposit control are engineered for the most demanding production environments. EFD low maintenance dispense valves provide consistent and drip-free dispensing of low-to-high viscosity fluids.

For complete process control, incorporate EFD ValveMate™ controllers and tank reservoirs. ValveMate controllers provide a fast, convenient way to adjust valve open time while EFD tank reservoirs maintain steady fluid pressure and prevent fluid contamination and evaporation.

Expert technical assistance and high quality standards ensure productive, trouble-free performance in speaker assembly applications.

Precise fluid deposits with

PICO Pulse valve system

Bonding coil to membrane in cell phone microspeakers with PICO Pulse® contact and jet valve systems.

Precise fluid deposits with

Performus hand-held dispensing systems

A digital timer and general-purpose air pressure regulator make Performus™ benchtop dispensers a good choice for processes that require a timed shot. The timer can be bypassed when making beads or operator-controlled fluid deposits.
