Models Included:
- PICO Touch
- PICO Touch-XP
You have selected a reliable, high-quality dispensing system from Nordson EFD, the world leader in fluid dispensing. Nordson EFD dispensing systems are designed specifically for industrial dispensing and will provide you with years of trouble-free, productive service.

This manual will help you maximize the usefulness of your dispensing system.

Please spend a few minutes to become familiar with the controls and features. Follow our recommended testing procedures. Review the helpful information we have included, which is based on more than 50 years of industrial dispensing experience.

Most questions you will have are answered in this manual. However, if you need assistance, please do not hesitate to contact EFD or your authorized EFD distributor. Detailed contact information is provided on the last page of this document.

The Nordson EFD Pledge

Thank You!

You have just purchased the world’s finest precision dispensing equipment.

I want you to know that all of us at Nordson EFD value your business and will do everything in our power to make you a satisfied customer.

If at any time you are not fully satisfied with our equipment or the support provided by your Nordson EFD Product Application Specialist, please contact me personally at 800.556.3484 (US), 401.431.7000 (outside US), or Jamie.Clark@nordsonefd.com.

I guarantee that we will resolve any problems to your satisfaction.

Thanks again for choosing Nordson EFD.

Jamie Clark, Vice President

Introduction

This manual provides installation, setup, programming, operation, and service information for Nordson EFD PICO® Touch™ Series controllers. Touch controllers control the operation of the Nordson EFD PICO Pulse® or PICO Pulse XP valve. Refer to the Pulse valve operating manual for detailed information on the valve.

NOTE: Nordson EFD also offers the PICO Touch XP (Extreme Precision) controller, for use with the PICO Pulse XP valve. This jetting system is designed for applications that require extremely precise, repeatable micro-deposits where strict tolerances or deposit definition must be met. For all information pertaining to the Touch XP controller, refer to “Appendix B, Touch XP Controller” on page 66.

The Touch controller provides an intuitive touchscreen interface for easy set up and operation of the Pulse valve. Through the touchscreen interface, you can:

- Control the operation of the valve, including open and close parameters and stroke control.
- Set the valve operating temperature.
- Fine-tune the dispensing performance by selecting preset ramp profiles or using custom profiles.
- View or change all controller settings.

The PICO Touch controller also allows external control of all parameters through a personal computer (PC).
Nordson EFD Product Safety Statement

⚠️ WARNING
The safety message that follows has a WARNING level hazard.
Failure to comply could result in death or serious injury.

**ELECTRIC SHOCK**
Risk of electric shock. Disconnect power before removing covers and/or disconnect, lock out, and tag switches before servicing electrical equipment. If you receive even a slight electrical shock, shut down all equipment immediately. Do not restart the equipment until the problem has been identified and corrected.

⚠️ CAUTION
The safety messages that follow have a CAUTION level hazard.
Failure to comply may result in minor or moderate injury.

**READ MANUAL**
Read manual for proper use of this equipment. Follow all safety instructions. Task- and equipment-specific warnings, cautions, and instructions are included in equipment documentation where appropriate. Make sure these instructions and all other equipment documents are accessible to persons operating or servicing equipment.

**MAXIMUM AIR PRESSURE**
Unless otherwise noted in the product manual, the maximum air input pressure is 7.0 bar (100 psi). Excessive air input pressure may damage the equipment. Air input pressure is intended to be applied through an external air pressure regulator rated for 0 to 7.0 bar (0 to 100 psi).

**RELEASE PRESSURE**
Release hydraulic and pneumatic pressure before opening, adjusting, or servicing pressurized systems or components.

**BURNS**
Hot surfaces! Avoid contact with the hot metal surfaces of heated components. If contact can not be avoided, wear heat-protective gloves and clothing when working around heated equipment. Failure to avoid contact with hot metal surfaces can result in personal injury.
Nordson EFD Product Safety Statement (continued)

**Halogenated Hydrocarbon Solvent Hazards**

Do not use halogenated hydrocarbon solvents in a pressurized system that contains aluminum components. Under pressure, these solvents can react with aluminum and explode, causing injury, death, or property damage. Halogenated hydrocarbon solvents contain one or more of the following elements.

<table>
<thead>
<tr>
<th>Element</th>
<th>Symbol</th>
<th>Prefix</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fluorine</td>
<td>F</td>
<td>“Fluoro-”</td>
</tr>
<tr>
<td>Chlorine</td>
<td>Cl</td>
<td>“Chloro-”</td>
</tr>
<tr>
<td>Bromine</td>
<td>Br</td>
<td>“Bromo-”</td>
</tr>
<tr>
<td>Iodine</td>
<td>I</td>
<td>“Iodo-”</td>
</tr>
</tbody>
</table>

Check the Safety Data Sheet (SDS) or contact your material supplier for more information. If you must use halogenated hydrocarbon solvents, contact your EFD representative for compatible EFD components.

**High Pressure Fluids**

High pressure fluids, unless they are safely contained, are extremely hazardous. Always release fluid pressure before adjusting or servicing high pressure equipment. A jet of high pressure fluid can cut like a knife and cause serious bodily injury, amputation, or death. Fluids penetrating the skin can also cause toxic poisoning.

⚠️ **WARNING**

Any injury caused by high pressure liquid can be serious. If you are injured or even suspect an injury:

- Go to an emergency room immediately.
- Tell the doctor that you suspect an injection injury.
- Show the doctor the following note.
- Tell the doctor what kind of material you were dispensing.

**Medical Alert — Airless Spray Wounds: Note to Physician**

Injection in the skin is a serious traumatic injury. It is important to treat the injury surgically as soon as possible. Do not delay treatment to research toxicity. Toxicity is a concern with some exotic coatings injected directly into the bloodstream.

**Qualified Personnel**

Equipment owners are responsible for making sure that EFD equipment is installed, operated, and serviced by qualified personnel. Qualified personnel are those employees or contractors who are trained to safely perform their assigned tasks. They are familiar with all relevant safety rules and regulations and are physically capable of performing their assigned tasks.
Nordson EFD Product Safety Statement (continued)

Intended Use
Use of EFD equipment in ways other than those described in the documentation supplied with the equipment may result in injury to persons or damage to property. Some examples of unintended use of equipment include:

- Using incompatible materials.
- Making unauthorized modifications.
- Removing or bypassing safety guards or interlocks.
- Using incompatible or damaged parts.
- Using unapproved auxiliary equipment.
- Operating equipment in excess of maximum ratings.
- Operating equipment in an explosive atmosphere.

Regulations and Approvals
Make sure all equipment is rated and approved for the environment in which it is used. Any approvals obtained for Nordson EFD equipment will be voided if instructions for installation, operation, and service are not followed. If the equipment is used in a manner not specified by Nordson EFD, the protection provided by the equipment may be impaired.

Personal Safety
To prevent injury, follow these instructions:

- Do not operate or service equipment unless you are qualified.
- Do not operate equipment unless safety guards, doors, and covers are intact and automatic interlocks are operating properly. Do not bypass or disarm any safety devices.
- Keep clear of moving equipment. Before adjusting or servicing moving equipment, shut off the power supply and wait until the equipment comes to a complete stop. Lock out power and secure the equipment to prevent unexpected movement.
- Make sure spray areas and other work areas are adequately ventilated.
- When using a syringe barrel, always keep the dispensing end of the tip pointing towards the work and away from the body or face. Store syringe barrels with the tip pointing down when they are not in use.
- Obtain and read the Safety Data Sheet (SDS) for all materials used. Follow the manufacturer’s instructions for safe handling and use of materials and use recommended personal protection devices.
- Be aware of less-obvious dangers in the workplace that often cannot be completely eliminated, such as hot surfaces, sharp edges, energized electrical circuits, and moving parts that cannot be enclosed or otherwise guarded for practical reasons.
- Know where emergency stop buttons, shutoff valves, and fire extinguishers are located.
- Wear hearing protection to protect against hearing loss that can be caused by exposure to vacuum exhaust port noise over long periods of time.
Nordson EFD Product Safety Statement (continued)

**Fire Safety**

To prevent a fire or explosion, follow these instructions:

- Shut down all equipment immediately if you notice static sparking or arcing. Do not restart the equipment until the cause has been identified and corrected.
- Do not smoke, weld, grind, or use open flames where flammable materials are being used or stored.
- Do not heat materials to temperatures above those recommended by the manufacturer. Make sure heat monitoring and limiting devices are working properly.
- Provide adequate ventilation to prevent dangerous concentrations of volatile particles or vapors. Refer to local codes or the SDS for guidance.
- Do not disconnect live electrical circuits when working with flammable materials. Shut off power at a disconnect switch first to prevent sparking.
- Know where emergency stop buttons, shutoff valves, and fire extinguishers are located.

**Preventive Maintenance**

As part of maintaining continuous trouble-free use of this product, Nordson EFD recommends the following simple preventive maintenance checks:

- Periodically inspect tube-to-fitting connections for proper fit. Secure as necessary.
- Check tubing for cracks and contamination. Replace tubing as necessary.
- Check all wiring connections for looseness. Tighten as necessary.
- Clean: If a front panel requires cleaning, use a clean, soft, damp rag with a mild detergent cleaner. DO NOT USE strong solvents (MEK, acetone, THF, etc.) as they will damage the front panel material.
- Maintain: Use only a clean, dry air supply to the unit. The equipment does not require any other regular maintenance.
- Test: Verify the operation of features and the performance of equipment using the appropriate sections of this manual. Return faulty or defective units to Nordson EFD for replacement.
- Use only replacement parts that are designed for use with the original equipment. Contact your Nordson EFD representative for information and advice.
Nordson EFD Product Safety Statement (continued)

Important Disposable Component Safety Information
All Nordson EFD disposable components, including syringe barrels, cartridges, pistons, tip caps, end caps, and dispense tips, are precision engineered for one-time use. Attempting to clean and re-use components will compromise dispensing accuracy and may increase the risk of personal injury.

Always wear appropriate protective equipment and clothing suitable for your dispensing application and adhere to the following guidelines:
• Do not heat syringe barrels or cartridges to a temperature greater than 38° C (100° F).
• Dispose of components according to local regulations after one-time use.
• Do not clean components with strong solvents (MEK, acetone, THF, etc.).
• Clean cartridge retainer systems and barrel loaders with mild detergents only.
• To prevent fluid waste, use Nordson EFD SmoothFlow™ pistons.

Action in the Event of a Malfunction
If a system or any equipment in a system malfunctions, shut off the system immediately and perform the following steps:
1. Disconnect and lock out system electrical power. If using hydraulic and pneumatic shutoff valves, close and relieve pressure.
2. For Nordson EFD air-powered dispensers, remove the syringe barrel from the adapter assembly. For Nordson EFD electro-mechanical dispensers, slowly unscrew the barrel retainer and remove the barrel from the actuator.
3. Identify the reason for the malfunction and correct it before restarting the system.

Disposal
Dispose of equipment and materials used in operation and servicing according to local codes.
Nordson EFD Product Safety Statement (continued)

Equipment-Specific Safety Information

The following safety information is specific to the Nordson EFD Touch controller.

Intended Use

- This equipment is for indoor use only.
- Use the Touch controller only in conjunction with its associated power cable and, if needed, its associated extension cable.
- Do not open the Touch controller.

Unintended Fluid Release

- Prior to initial operation, check to see if fluid flows out of a valve that is turned off even when no fluid pressure is being applied. If this occurs, it may be because the fluid reservoir is positioned higher than the valve, in which case hydrostatic pressure causes the fluid to flow out of a valve that is not closed. Position the fluid reservoir low enough such that no fluid leaks from the valve when the valve is shut off.
- In the case of damage to the piezo actuator or the Touch controller, the valve may transition from a CLOSED to an OPEN condition, which can cause fluid release. Nordson EFD recommends continually monitoring the status signal of the Touch controller and immediately and automatically bleeding the fluid reservoir if these signals indicate an error.
- Before connecting or disconnecting a valve cable, release fluid pressure and disconnect and lock out power to the Touch controller.
Specifications

NOTE: Specifications and technical details are subject to engineering change without prior notification.

WEEE Directive

This equipment is regulated by the European Union under WEEE Directive (2012/19/EU). Refer to www.nordsonefd.com/WEEE for information about how to properly dispose of this equipment.
Operating Features

Front Panel

NOTE: The VALVE power and communication ports differ on the Touch XP controller. Refer to “Touch XP Back Panel” on page 67.

Back Panel

NOTE: The VALVE power and communication ports differ on the Touch XP controller. Refer to “Touch XP Back Panel” on page 67.
Installation

Use this section in tandem with the quick start guide and any other system component operating manuals to install all components of the system.

Unpack the System Components

1  PICO Touch controller (standard Touch controller shown)
2  Power cord, American plug, Touch controller, 2 m (6.6 ft) (ordered separately)
3  Cable, USB, A male to B male, 2 m (6.6 ft)
4  Backshell, I/O, 15 position, D-sub
5  Connector, I/O, 15 position, D-sub
6  Power supply, Touch controller, 1 m (3.3 ft) (ordered separately)
7  PICO Pulse valve (ordered separately) (standard Pulse valve shown)
8  Extension cable (optional)

(Not shown)
Quick start guide
Install the Valve and Controller

The callouts in the system installation images correspond to the steps in this procedure.

1. Install any components other than the Pulse valve and controller that will comprise the complete dispensing system. For example, if you are using a fluid reservoir, position and install all the fluid reservoir components. For all ancillary components, refer to the quick start guide and / or operating manual provided with those components for installation, setup, and operating instructions.

⚠️ CAUTION
Ensure that air can flow around the controller. Blocked air flow can cause overheating.

2. Install or position the Touch controller. The controller can be integrated into existing machinery or used as a tabletop device:
   - To integrate the controller into existing machinery, remove the feet (if needed) and use the following specifications to install it as a standard rack mount:
     - Height: 3U
     - Width: 28 Hp
     - Depth: for 160 mm (6.3")
   - To use the controller as a tabletop device, lower the hinged legs.
   - Ensure there is adequate air flow around the controller.

3. Connect power to the controller as follows:
   a. Connect power to the back of the controller and to your local power source observing the following guidelines:
      - Use only the power supply and cord ordered with the controller.
      - Ensure that the power source is located near the equipment and is easily accessible.
      - Use only on a circuit with a fuse or circuit breaker that is 20 A or less.
   b. Connect a 16 AWG (1.3 mm) ground wire to the chassis grounding screw on the rear of the chassis using a toothed grounding lug. The wire must have green insulation with a yellow stripe or must be non-insulated (bare).
   c. Attach the opposite end of the ground wire to a permanent earth ground using toothed washers or a toothed lug.

⚠️ CAUTION: Nordson EFD requires the use of the power cord ordered with the controller. If it is not possible to use this power cord, you must source an IEC 60320-C13 power cord to plug into the power supply. The power supply must be grounded through the power cord to ensure proper operation.
Install the Valve and the Controller (continued)

**CAUTION**
Always switch OFF the Touch controller before connecting or disconnecting the valve. Failure to do so can damage the controller and the valve.

4. Assemble and mount the Pulse valve as follows:
   a. Open the hinged seat of the piezo actuator by pushing the latch pin back towards the valve.
   b. Insert the fluid body assembly and close the hinged seat, ensuring it is fully engaged.

   c. Referring to the guidelines below, install the Pulse valve on the dispensing equipment:
      - Nordson EFD strongly recommends using a valve mounting bracket. There are multiple mounting holes to allow for adjustment. Some valve mounting examples are shown below.
      - For repeatable mounting-location precision, use alignment dowels to mount the valve by the frame side.
      - When mounting the valve, do not install bracketing that could apply pressure to either side panel. Doing so can damage the piezoactuator, compromising valve performance.
      - When mounting a Pulse XP valve, ensure that the fluid supply feed loads are properly supported to prevent movement of the fluid body assembly. For Pulse XP valves, proper mounting is critical to ensure correct operation. Forces applied to the valve where the fluid supply attaches can cause strain movements of the fluid body assembly, which can result in calibration errors if the strain movements are too large (alarm code b17 020 on the Touch controller).

**NOTE:** Valve mounting kits are available. Refer to the valve operating manual.

---

The valve mounting bracket must not extend more than 10 mm (0.4 in.) from the back of the valve.

Examples of valve mounting using the optional bracket
Install the Valve and the Controller (continued)

⚠️ CAUTION ⚠️

Do not exceed the maximum extension cable length of 9 m (30 ft). Doing so will adversely affect communication between the valve and the controller.

⚠️ CAUTION ⚠️

Do not connect or disconnect a Pulse XP valve cable to a Touch XP controller when the controller is powered ON. Doing so can cause a b11 error and possibly damage the valve or the controller.

d. Ensuring that the controller is powered OFF, connect the valve power and communication cables to the connectors on the back of the Touch controller. Refer to “Valve Extension Cables (Standard Touch Controller)” on page 47 for available extension cables.

**NOTE:** The VALVE power and communication ports differ on the Touch XP controller, so different valve extension cables are required. For Touch XP controller extension cables, refer to “Touch XP Valve Extension Cables” on page 74.

e. To divert static charges from the valve, connect it to the machine system ground. Vacant fastening threads may be used for this.

f. Add the fluid supply, but do not pressurize the fluid supply at this point.

**NOTE:** For low viscosity fluids used in a syringe barrel application, fill the barrel after installing it on the fluid-inlet fitting. High viscosity materials can be loaded into the barrel before installing it on the inlet fitting.

5. Connect inputs / outputs (I/O) to I/O 1 and I/O 2 as needed for your operation. Refer to “Input / Output Port Pin Descriptions” on page 52 for detailed I/O information. A 15-position D-sub and backshell are provided. A cable for the 25-pin D-sub connection is customer-supplied.

**NOTE:** Nordson EFD recommends using the analog temperature output (I/O 1, pin 11) to provide operators with appropriate identification and protection against contact when the valve temperature exceeds +45° C (113° F).
Install the Valve and the Controller (continued)

**CAUTION**

Do not dry cycle the Pulse valve! The ceramic nozzle seat and ball can be damaged if the valve is operated without fluid, causing leakage and a poor seal. Precise dispensing can no longer be guaranteed if this occurs.

6. Start up and test the system as follows:

   a. Switch the Touch controller power ON and complete the touchscreen calibration as prompted (required only at initial startup).

   b. **(Heated systems only):**
      
      • Press the HEATERS icon ( Heater) and then enter a temperature SETTING that is just above the ambient temperature (or as appropriate for the fluid).
      • Press ON to switch the HEATERS mode to On.
      • Wait for the system to reach temperature setpoint.
      
      NOTE: The HEATERS screen shows the actual temperature of the valve.

   c. **IMPORTANT:** Press the VALVE icon ( Valve) and then press POWER to switch the valve ON.

   d. Introduce fluid to the system.

   e. Set the reservoir pressure lower for thin fluids and higher for thick fluids [approximately 0.4–1.0 bar (5–15 psi), depending on the fluid]. For tanks, use the in-line air shut-off valve to pressurize or de-pressurize the fluid supply. For syringe barrels, connect or disconnect the adapter assembly from the reservoir pressure regulator and gauge.

   f. Press the PURGE icon ( Purge) and allow fluid to purge from the system until the fluid flow is steady.

   g. Press MODE and enter the following recommended settings to test an actual deposit:
      
      • MODE = Timed
      • PULSE = 0.5 (ms)
      • CYCLE = 5 (ms)
      • COUNT = 10

   h. Press the CYCLE icon ( Cycle).
      
      The system dispenses 10 deposits and displays the frequency (FREQ) indication on the VALVE screen.

   i. Make parameter adjustments until the desired deposit result is achieved. Use caution not to exceed maximum frequency ranges.
User Interface

The controller is operated through an easy-to-use touchscreen interface. This section provides an overview of the user interface and all the controller’s screens and menus.

Navigation and Screen Structure

All system controls are accessed through the icons and buttons on the touchscreen. Each screen includes icons that allow you to jump quickly to other main screens. Each screen also shows the current LCD display version and the system UpTime, which is an indicator of how long the controller has been active or operational. The UpTime is specifically used to track when alarm conditions occur in the controller.

Alarm Indication

The title bar blinks red anytime an alarm condition is detected, regardless of the type of alarm. For example, if a POWER alarm occurs when the VALVE screen is open, the title bar blinks red even though the alarm is not a valve-related alarm. To view the alarm type, touch the title bar.

Example of the alarm screen
User Interface (continued)

Buttons and Icons
System selections are made by pressing a button or an icon. Buttons change color based on their status, as shown in the following table.

<table>
<thead>
<tr>
<th>Button</th>
<th>Button Color</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Blue</td>
<td>Not selected</td>
</tr>
<tr>
<td></td>
<td>Pale blue</td>
<td>Selected</td>
</tr>
<tr>
<td></td>
<td>Light gray</td>
<td>Disabled</td>
</tr>
</tbody>
</table>

All non-textual system controls are shown in the legend below. Screen names are shown in all-capital letters. This legend is present on the pages of this manual that include programming procedures.

A system refresh occurs upon power on or when settings are changed remotely. When the system refreshes, an hourglass appears on the touchscreen and no user input is accepted. Refresh takes just a few seconds.
User Interface (continued)

Entering Values
A numeric or alphanumeric keypad appears whenever data entry is required, such as for password entry.

CANCEL
Press to discard any entered data and return to the previous screen

BACKSPACE
Press to delete one character

INCREMENT (+) or DECREMENT (-)
Press to increase or decrease in the current field value (increments vary based on the setting being modified)

UNDERSCORE

Example of a numeric data entry screen

**VALVE Screen (Standard Toµch Controller)**

The VALVE screen is used to change the operating mode, enter valve dispensing parameters, and control valve power.

**NOTE:** The VALVE screen differs on the Toµch XP controller. Refer to “Toµch XP VALVE Screen” on page 68.

<table>
<thead>
<tr>
<th>Button or Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>MODE</strong></td>
<td>Sets the system operating mode.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timed</td>
<td>In the Timed mode, the valve cycles according to the settings for PULSE (valve open time), CYCLE (time between deposits), and COUNT (number of deposits) for each valve initiate signal.</td>
</tr>
<tr>
<td>Continuous</td>
<td>In the Continuous mode, the valve cycles according to the settings for PULSE (valve open time) and CYCLE (time between deposits) for as long as the valve initiate signal is active, ignoring any setting for COUNT (number of deposits). <strong>NOTE:</strong> If the system is latched on to a signal in the Continuous mode, you cannot change screens.</td>
</tr>
<tr>
<td>External</td>
<td>In the External mode, the controller operates as a slave to an input signal and thus no longer generates the timing signals required to drive the valve. This mode is typically used with a device such as the PICO 2+2-XCH-V3 Controller (a legacy product) for pattern generation. <strong>NOTE:</strong> This selection is available only when SHOW VALVE EXTERNAL is toggled ON via the SYSTEM screen. Refer to SHOW VALVE EXTERNAL under “SYSTEM Screens” on page 32.</td>
</tr>
</tbody>
</table>

**CAUTION**

Because the controller does not generate timing signals in the external mode, take care to not exceed the maximum operating parameters of the connected valve. In addition, the time setting of any external signal used to drive the valve must be greater than the RAMP OPEN profile time setting (refer to “WAVE PROFILE Screen” on page 27). Exceeding timing and valve operational parameters can result in overall loss of performance.

</tbody>
</table>
**WAVE PROFILE Screen**

A wave profile, or waveform, is the rise and fall of the valve actuation signal. The WAVE PROFILE screen is used to select a wave profile. Two pre-programmed wave profiles (RAMP and SMOOTH) are included. RAMP is the default wave profile. Up to four additional custom wave profiles can be created by Nordson EFD. Contact your Nordson EFD technical support representative for assistance.

**NOTES:**

- Press the RAMP or SMOOTH buttons for a description of these profiles (and also to enable the selected profile).
- On the WAVE PROFILE screen, press the Wave Profile icon (🎨) to open the WAVE PARAMETERS screen, which is used to fine-tune the enabled wave profile. Refer to “WAVE PARAMETERS Screen (Standard Touch Controller)” on page 28 for details.

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAMP</td>
<td>Enables the Ramp wave profile. This is the default selection. Use this wave profile when dispensing thicker or shear-thinning fluids.</td>
</tr>
<tr>
<td>SMOOTH</td>
<td>Enables the Smooth wave profile. Use this wave profile for micro-bubble mitigation. The Smooth wave profile has softer edges to prevent agitation or cavitation of shear, sensitive fluids, such as UV-cure adhesives.</td>
</tr>
<tr>
<td>1, 2, 3, or 4</td>
<td>Up to four custom wave profiles configured by Nordson EFD can be added. Contact your Nordson EFD technical support representative for assistance.</td>
</tr>
</tbody>
</table>
WAVE PARAMETERS Screen (Standard Touch Controller)

The WAVE PARAMETERS screen is used to adjust the parameters of a wave profile in order to fine-tune the resulting material deposit. The graph on the screen provides a visual representation of a wave profile.

NOTES:

- On a standard Touch controller, STROKE is a percentage value.
- This screen is accessed in two ways: (1) by pressing the Wave Profile icon ( allocations) on the HOME screen or (2) by pressing the Wave Profile icon ( allocations) on the WAVE PROFILE screen.
- Wave profiles are enabled on the WAVE PROFILE screen. Refer to “WAVE PROFILE Screen” on page 27.
- This screen differs on the Touch XP controller. Refer to “Touch XP WAVE PARAMETERS Screen” on page 69.

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLOSE VOLTS</td>
<td>Sets the voltage to close the valve. The higher the voltage, the greater the sealing force applied.</td>
</tr>
<tr>
<td>STROKE</td>
<td>Sets the total percent of the CLOSE VOLTS setting for each initiate cycle. For example, a CLOSE VOLTS setting of 120V and a STROKE setting of 50% means that when the valve actuates, the voltage changes from 120V to 60V and then back to 120V. <strong>NOTE:</strong> This parameter differs on the Touch XP controller. Refer to “Touch XP WAVE PARAMETERS Screen” on page 69.</td>
</tr>
<tr>
<td>OPEN</td>
<td>Sets how fast the valve opens. The range is valve-dependent, but typically 200–500 µs.</td>
</tr>
<tr>
<td>CLOSE</td>
<td>Sets how fast the valve closes. The range is valve-dependent, but typically 200–2,000 µs.</td>
</tr>
<tr>
<td>Wave Profile icon</td>
<td>When pressed on this screen, the Wave Profile icon opens the WAVE PROFILE screen, on which you can select a different wave profile. Refer to “WAVE PROFILE Screen” on page 27 for details.</td>
</tr>
</tbody>

</thead>
<tbody>
<tr>
<td>![SYSTEM](SYSTEM password required for access)</td>
<td>SYSTEM</td>
<td>Opens the SYSTEM screen, which provides access to the system-level settings.</td>
</tr>
<tr>
<td></td>
<td>PULSE OFFSET</td>
<td>Sets a minimum time (in ms) difference allowed between the VALVE screen CYCLE and PULSE settings. For example, if PULSE OFFSET is set to 3 and a user enters 1.00 (ms) for CYCLE, then the setting entered for PULSE must be 4.00 ms or greater.</td>
</tr>
<tr>
<td></td>
<td>MAX PULSER Time</td>
<td>Sets the maximum time (in ms) that the CYCLE icon can be held active in the Continuous mode or when purging.</td>
</tr>
<tr>
<td></td>
<td>SHOW VALVE External</td>
<td>Adds EXTERNAL to the MODE selections available on the VALVE screen. Refer to MODE under “VALVE Screen (Standard Touch Controller)” on page 24 for additional information on the external mode.</td>
</tr>
<tr>
<td></td>
<td>MIN CYCLE Time</td>
<td>Sets a minimum time (in ms) that can be entered for CYCLE on the VALVE screen. The controller automatically modifies an entered CYCLE setting if it exceeds the safe operating range of the connected valve. Default: 30 (ms)</td>
</tr>
<tr>
<td></td>
<td>PULSE OK Time</td>
<td>Sets how long the PULSE OK output signal (pin 14 on the 15-pin I/O connector) stays on AFTER the current dispense parameters are executed. Default: 6 (ms) Range: 1–100 (ms)</td>
</tr>
<tr>
<td></td>
<td>CELSIUS or FAHRENHEIT</td>
<td>Sets how temperature units are displayed (Celsius or Fahrenheit).</td>
</tr>
<tr>
<td></td>
<td>SERVICE</td>
<td>Nordson EFD use only.</td>
</tr>
<tr>
<td></td>
<td>Show STACK Temp.</td>
<td>When SHOW STACK TEMP is toggled on, the controller displays the actual temperature of the piezo actuator stack on the VALVE screen. When SHOW STACK TEMP is toggled off, the stack temperature is not displayed. <strong>NOTE:</strong> This setting becomes useful when the valve is operating at the higher end of its operating range. Stack temperature is a crucial variable that can cause the controller to generate an alarm as it tries to protect the valve. Once the stack temperature reaches 55° C (131° F), the controller generates an alarm because the valve temperature is getting too hot.</td>
</tr>
<tr>
<td></td>
<td>PASSWORDS</td>
<td>Opens the SET CONTROL PASSWORD screen, which provides access to the password setup options. Refer to “Managing Password Protection” on page 40 for additional information.</td>
</tr>
<tr>
<td></td>
<td>RESET</td>
<td>Forces a reset of the LCD and re-initiates communication with the controller. All settings return their factory default values. Performing a reset causes an LCD fault alarm.</td>
</tr>
<tr>
<td></td>
<td>More...</td>
<td>Toggles between the two system screens.</td>
</tr>
</tbody>
</table>
Setup and Programming Procedures

Use these procedures as needed to finalize setup, fine-tune the performance of the system, or view / change settings.

NOTE: These procedures show data being entered manually at the Toµch controller. To operate the controller remotely, refer to “Appendix A, Remotely Operating the Controller” on page 59.

Connecting a Valve Initiate Signal

Follow this procedure to connect a clean, bounce-free input signal to initiate valve dispense cycles.

1. IMPORTANT: Connect a clean, bounce-free valve initiate signal to the following pins of the I/O port on the back of the controller:
   • Pin 3 — USET Metering Start High (Valve Initiate)
   • Pin 4 — USET Metering Start Low (GND)
   Refer to “Input / Output Port Pin Descriptions” on page 52 for detailed I/O information.

2. Change the operating mode to Timed.

Changing the System (VALVE) Operating Mode

Follow this procedure to change the operating mode. For more information on the modes, refer to “VALVE Screen (Standard Toµch Controller)” on page 24.

1. Press the VALVE icon ( ).

2. Press MODE until the touchscreen shows the desired operating mode.
   - Timed: The valve cycles according to the settings for PULSE (valve open time), CYCLE (time between deposits), and COUNT (number of deposits) for each valve initiate signal. When you press the CYCLE icon, the system dispenses for one cycle.
   - Continuous: The valve cycles according to the settings for PULSE (valve open time) and CYCLE (time between deposits) for as long as the valve initiate signal is active, ignoring any setting for COUNT (number of deposits). When you press the CYCLE icon, the system opens the valve for 10 seconds or until you press the CYCLE icon again, ignoring COUNT.
   - External: The controller operates as a slave to an input signal and ignores all programmed settings. Refer to “VALVE Screen (Standard Toµch Controller)” on page 24 for cautions and important information about this mode.

3. Press HOME to save the setting and return to the HOME screen.
Setup and Programming Procedures (continued)

Adjusting the Valve Operating Parameters (PULSE, CYCLE, or COUNT)

Follow this procedure to adjust how the valve operates, including valve open time (PULSE), time between deposits (CYCLE), and number of deposits per cycle (COUNT). For more information on these parameters, refer to “VALVE Screen (Standard Touch Controller)” on page 24.

1. Press the VALVE icon ( ).
2. Press PULSE, CYCLE, or COUNT. A numeric keypad appears for data entry.
3. Enter the desired setting for PULSE, CYCLE, or COUNT.
   - **PULSE**: How long the valve stays open (in ms).
   - **CYCLE**: Amount of time between deposits (in ms).
   - **COUNT**: Number of deposits per cycle.
4. Press OK (check) > HOME to save the setting and return to the HOME screen.

Switching Valve Power On or Off

Follow this procedure to set whether a valve initiate signal is processed. Valve initiate signals are processed only when valve Power is ON.

**NOTE:** By default, valve POWER is ON when the controller is switched ON (or anytime the controller is rebooted). To change the valve POWER setting default, refer to “Appendix A, Remotely Operating the Controller” on page 59.

1. Press the VALVE icon ( ).
2. Press POWER until the touchscreen shows the desired valve power status.
   - **On**: Valve closed; valve initiate signals processed.
   - **Off**: Valve open; valve initiate signals NOT processed.
3. Press HOME to save the setting and return to the HOME screen.
Setup and Programming Procedures (continued)

Switching the Heater Control (MODE) to On, Off, or Remote

Follow this procedure to switch the heater control on or off or to change the heater mode to remote operation.

1. Press the HEATERS icon ( ).
2. Press the button for the desired heater mode.
   - **Off**: Heater control switches OFF.
   - **On**: Heater control switches ON.
   - **Remote**: Heater control follows a remote input signal (refer to “Input / Output Port Pin Descriptions” on page 52 to connect inputs / outputs).
3. Press HOME to save the setting and return to the HOME screen.

Viewing or Changing the Valve Heater Temperature / Temperature Setpoint

Follow this procedure to view or change the valve heater setpoint temperature or to view the actual temperature of the valve heater.

1. Press the HEATERS icon ( ).
2. Press SETTING and enter the desired temperature setpoint on the numeric keypad.

**NOTES:**
- The actual temperature of the heater is displayed on the touchscreen next to ACTUAL.
- To change how temperature units are displayed, refer to “Viewing or Changing System Settings” on page 39.
3. Press OK (check) > HOME to save the setting and return to the HOME screen.
Setup and Programming Procedures (continued)

Connecting a Controller Status Monitoring Signal

The Pulse valve is normally open and power must be applied to close it. In the case of damage to the piezo actuator or the Touch controller, the valve may transition from a CLOSED to an OPEN condition, which can cause fluid release. Nordson EFD recommends continually monitoring the status signal of the Touch controller and immediately and automatically de-pressurizing the system if the signal indicates an error. Follow this procedure to connect a controller status monitoring signal.

Connect wiring from the monitoring device to the following pins of the I/O port on the back of the controller:

- Pin 7 — Power signal
- Pin 13 — Error Out signal

Refer to “Input / Output Port Pin Descriptions” on page 52 for detailed I/O information.
Managing the Wave Profile

A wave profile, or waveform, is the rise and fall of the valve actuation signal. The WAVE PROFILE screen is used to select a wave profile. Two pre-programmed wave profiles (RAMP and SMOOTH) are included. RAMP is the default wave profile. Up to four custom wave profiles can be added.

From the HOME screen or the WAVE PROFILE screen, you can open the WAVE PARAMETERS screen, which includes four adjustable settings that can be used to fine-tune the enabled Wave Profile.

Selecting a Wave Profile

1. On the HOME screen, press the WAVE PROFILE icon ( ).
   The WAVE PARAMETERS screen opens.

2. On the WAVE PARAMETERS screen, press the WAVE PROFILE icon ( ).
   The WAVE PROFILE screen opens. The selected wave profile is indicated by the pale blue button.

3. Press the button of the wave profile you want to enable:
   - RAMP: This is the default selection. Use this wave profile when dispensing thicker or shear-thinning fluids.
   - SMOOTH: Use this wave profile for micro-bubble mitigation. The Smooth wave profile has softer edges to prevent agitation or cavitation of shear, sensitive fluids, such as UV-cure adhesives.
   - 1, 2, 3, or 4: Up to four custom wave profiles configured by Nordson EFD can be added. Contact your Nordson EFD technical support representative for assistance.

4. When the selected wave profile screen opens, press OK (check) to enable the profile, or press X to cancel.

5. To make adjustments to the selected wave profile, continue to "Adjusting a Wave Profile (Standard Touch Controller)" on page 38.
Managing the Wave Profile (continued)

Adjusting a Wave Profile (Standard Touch Controller)

The WAVE PARAMETERS screen includes four adjustable settings that can be used to fine-tune the enabled Wave Profile.

**NOTE:** Custom profiles created before February 2020 cannot be edited.

1. On the HOME screen, press the WAVE PROFILE icon ( ).
   The WAVE PARAMETERS screen for the enabled wave profile opens.
   **NOTE:** To determine which wave profile is active, refer to “Selecting a Wave Profile” on page 37.

2. On the WAVE PARAMETERS screen, make the desired adjustments to the following parameters:
   - **CLOSE VOLTS:** The voltage applied to close the valve. The higher the voltage, the greater the sealing force applied.
   - **STROKE:** The voltage applied for each initiate cycle. For example, a CLOSE VOLTS setting of 120V and a STROKE setting of 50% means that when the valve actuates, the voltage changes from 120V to 60V and then back to 120V.
     **NOTE:** The STROKE setting differs on the Touch XP controller. Refer to “Adjusting a Wave Profile on the Touch XP Controller” on page 71.
   - **OPEN:** How fast the valve opens.
   - **CLOSE:** How fast the valve closes.
     **NOTE:** Minimum limits are valve-specific and will be updated by the controller if they are exceeded.

3. Press HOME to save the settings and return to the HOME screen.
Setup and Programming Procedures (continued)

Viewing or Changing System Settings
Follow this procedure as needed to view or change the SYSTEM settings explained under “SYSTEM Screens” on page 32.

1. Press the SETTINGS icon ( ).
2. Press the SYSTEM icon ( ) and enter the SYSTEM password.
3. Press MORE... to toggle between the SYSTEM1,2 and SYSTEM2,2 screens.
4. Refer to the SYSTEM section of the “SYSTEM Screens” on page 32 for detailed information the following SYSTEM screen selections:
   - PULSE OFFSET
   - MAX PULSER Time
   - SHOW VALVE External
   - MIN. CYCLE Time
   - PULSE OK Time
   - CELSIUS / FAHRENHEIT (how temperature units display)
   - SERVICE
   - Show STACK Temp.
   **NOTE:** For PASSWORDS, refer to “Managing Password Protection” on page 40.
   **NOTE:** For RESET, refer to “Restoring the System to the Factory Default Settings” on this page.
5. Press HOME to save the setting and return to the HOME screen.

Restoring the System to the Factory Default Settings
Follow this procedure to restore all system settings to their factory-default values.

1. Press the SETTINGS icon ( ).
2. Press the SYSTEM icon ( ).
3. Press MORE... > RESET > and enter the RESET password.
4. Press OK (check) to reset the system. The system prompts for verification.
Setup and Programming Procedures (continued)

Managing Password Protection

The controller requires one of three password types to access some screens.

Changing a SYSTEM or LOCKOUT Password

NOTE: To password-protect (lock out) additional menu items, refer to “Managing Lockouts” on page 41.

1. Press the SETTINGS icon ( ).
2. Press the SYSTEM icon ( ) and enter the SYSTEM password.
3. Press MORE... > PASSWORDS > and enter the SYSTEM password.
4. Press SYSTEM or LOCKOUT and then enter the new password. Passwords are limited to eight (8) characters.
5. Press OK (check) > HOME to save the setting and return to the HOME screen.

Resetting the SYSTEM and LOCKOUT Passwords

If you forget a SYSTEM or LOCKOUT password, follow this procedure to reset the passwords to their defaults.

NOTE: Changing the LOCKOUT password AND also enabling the SYSTEM lockout removes the ability to perform this password reset. Contact Nordson EFD Technical Services if you forget your custom LOCKOUT password and you have enabled the SYSTEM lockout.

1. Press the SETTINGS icon ( ).
2. Press the SYSTEM icon ( ).
3. When prompted for the SYSTEM password, enter PICO_TOUCH.
   The SYSTEM and RESET passwords are restored to their defaults and the controller opens the SET PASSWORDS screen.
4. Enter new passwords or press HOME to accept the factory defaults.
Setup and Programming Procedures (continued)

Managing Lockouts

Lockouts block access to specific screens or menu items to prevent unintended changes, thus providing an additional layer of protection. When a screen or menu item is locked out, it cannot be accessed.

1. Press the SETTINGS icon ( ).
2. Press the LOCKOUTS icon ( ) and then enter the LOCKOUT password.
3. The SET FUNCTION LOCKOUT 1, 2 screen appears. Press MORE to see the SET FUNCTION LOCKOUT 2, 2 SCREEN.

The following table shows the control functions that can be locked out for each selection.

<table>
<thead>
<tr>
<th>Button</th>
<th>Lockout Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>HEATER</td>
<td>MODE or SETTING buttons</td>
</tr>
<tr>
<td>VALVE</td>
<td>MODE, PULSE, CYCLE, COUNT, or POWER buttons</td>
</tr>
<tr>
<td>WAVE PARAMETERS</td>
<td>STROKE, CLOSE, OPEN, or CLOSE VOLTS buttons</td>
</tr>
<tr>
<td>SYSTEM</td>
<td>SYSTEM screen (locks out entire screen)</td>
</tr>
<tr>
<td>RESET</td>
<td>RESET button (locks out the factory reset function)</td>
</tr>
<tr>
<td>PASSWORDS</td>
<td>SET PASSWORDS screen (locks out entire screen)</td>
</tr>
<tr>
<td>CALENDAR CLOCK</td>
<td>Not available</td>
</tr>
</tbody>
</table>

4. Make your desired selections. Press HOME to save the setting and return to the HOME screen.

NOTE: The SYSTEM, RESET, PASSWORDS, and CALENDAR CLOCK buttons do not have an associated lockout screen.
Setup and Programming Procedures (continued)

Adjusting the LCD and Beep Settings

Follow this procedure to make LCD and beep-sound adjustments.

1. Press the SETTINGS icon ( ).
2. Press the LCD SETTINGS icon ( ).
3. Enter the desired setting for SLEEP TIMER, BEEP, BRIGHTNESS, and BEEP LEVEL.
   - **SLEEP TIMER:** How long the touchscreen remains on with no user interaction before entering a sleep mode (touch any part of the screen to restore the display).
   - **BEEP:** Switches the button-press beep sound on or off.
   - **BRIGHTNESS:** Sets the touchscreen brightness (25–100%).
   - **BEEP LEVEL:** Sets the button-press beep volume (5–100%).
4. Press OK (check) > HOME to save the setting and return to the HOME screen.

Calibrating the LCD

1. Press the SETTINGS icon ( ).
2. Press the LCD SETTINGS icon ( ).
3. Press CALIBRATE TOUCH DISPLAY.
4. Follow the on-screen directions to calibrate the touchscreen.
5. Press OK (check) > HOME to save the setting and return to the HOME screen.
Setup and Programming Procedures (continued)

Setting the Language
1. Press the SETTINGS icon ().
2. Press the LANGUAGE icon ().
3. Press MORE... to toggle through the SET LANGUAGE screens.
4. Press the button for the correct language.
5. Press HOME to save the setting and return to the HOME screen.

Viewing the Controller and Valve Information
Firmware resides in three locations in a PICO Touch system: On the main circuit board inside the Touch controller, on the LCD circuit board, and on a small circuit board inside the Pulse valve.

1. Press the SETTINGS icon ().
2. Press the ABOUT icon ().
3. Press MORE... to see the ADDITIONAL INFORMATION screen.
The ABOUT and ADDITIONAL INFORMATION screens provide the current system information. Refer to “SETTINGS Screen” on page 29 for additional details on these screens.
Operation

Follow these recommended procedures for daily/routine startup and shutdown to obtain the best performance from your system.

⚠️ CAUTION

The Pulse valve is normally open and power must be applied to close it. In the case of damage to the piezo actuator or the Touch controller, the valve may transition from a CLOSED to an OPEN condition, which can cause fluid release. Nordson EFD recommends continually monitoring the status signal of the Touch controller and immediately and automatically de-pressurizing the system if the signal indicates an error.

Routine Startup

1. Switch the Touch controller power ON.
2. If the process requires a heated valve, press the HEATERS icon and then press ON to switch the HEATERS mode to On.

   NOTE: Upon reboot, the controller remembers the last selected HEATERS mode.

Switching on heater control
Operation (continued)

3. Press the VALVE icon and then MODE until the touchscreen shows the desired operating mode.

4. Start your process.

Purging the System
Press the VALVE > PURGE icons as needed to clear debris or after changing the fluid body assembly. Refer to the valve operating manual for more detailed information on purging and system cleaning.
Operation (continued)

Clearing Alarms

When an alarm occurs, the screen title bar blinks red and an alarm window appears.

When an alarm occurs:

1. Clear the alarm. Alarms can be cleared in two ways:
   • Locally at the controller by pressing OK (check).
   • Remotely through pin 6 (Error Reset) of the I/O 1 (input / output) connector. Refer to “Input / Output Port Pin Descriptions” on page 52 to connect inputs / outputs.

2. If needed, correct the problem that caused the alarm. Refer to “Troubleshooting” on page 48 for complete troubleshooting information, including a list of all system alarms, causes, and corrective actions.

Routine Shutdown

1. Stop the process.
2. De-pressurize the system.

⚠️ WARNING
Risk of burns. Wear heat-protective gloves when working with a heated valve.

3. If the valve is heated, switch OFF heater control.
4. Refer to the valve manual to perform any of the following procedures as appropriate for the fluid:
   • Removing the fluid body assembly.
   • Purging the valve with the process fluid.
   • Purging the valve with cleaning fluid.
   • Cleaning the valve fluid paths.
Standard Touch Controller Part Number

NOTES:
- Power cords are purchased separately.
- Refer to “Touch XP Controller Part Number” on page 74 for the Touch XP controller part number.

Accessories

Valve Extension Cables (Standard Touch Controller)

NOTE: The Touch XP controller requires different extension cables from the standard Touch controller. Refer to “Touch XP Valve Extension Cables” on page 74 for the Touch XP controller extension cables.

⚠️ CAUTION
Risk of equipment damage. The standard Touch controller does not accept extension cables designed for the Touch XP controller.

⚠️ CAUTION
Do not exceed the maximum extension cable length of 9 m (30 ft). Doing so will adversely affect communication between the valve and the controller.

| b14      | 007           | Loss of Valve Communications| Valve cables   | Controller experiencing valve communication issues; typically caused by a faulty physical connection:  
1. On the controller alarm screen, press OK (check).  
   **NOTE:** This action clears the screen, but may not clear the alarm. Continue with the next steps to ensure the alarm is cleared.  
2. Switch the controller OFF and wait 5 seconds for the valve to fully discharge.  
3. Ensure that the valve cables are properly connected.  
4. Check the valve cables for damage and replace as needed.  
5. Switch the controller ON and verify that the controller shows valve temperature readings on the HEATERS screen.  
   **NOTE:** Valve communication can also be verified by ensuring that the valve serial number is shown on the INFO screen. Refer to “Viewing the Controller and Valve Information” on page 43. |
| b15      | 008           | No Valve Detected           | Valve cables   | System cannot detect a valid valve connected to the controller:  
• Ensure that all wiring connections are correct.  
• Ensure that the valve cables are properly connected. |
| b16      | 009           | PZD Communication Fault     | Controller     | Issue with system electronics:  
• Switch off the controller and wait 5 seconds for the valve to fully discharge, then switch on the controller. If the alarm persists, return the controller to Nordson EFD or to the vendor for service. |

Appendix A, Remotely Operating the Controller

You can operate the controller through a personal computer (PC) using the supplied USB communication cable or by connecting to the RS232 connection through the 25-pin D-sub (port I/O 2). Communicating in this manner allows you to modify dispensing parameters remotely and also to load custom wave profiles on the controller.

Connection Using a PC
Connect the USB cable to the USB port on the back of the controller and to a PC.

Connection Using RS232
The 25-pin D-sub (port I/O 2) is configured for use with a null modem cable. Alternatively, use the I/O 2 port RS232 pins (pins 2 and 3) to make your connection. Refer to “I/O 2 25-Position D-Sub” on page 54 for the I/O 2 port pin descriptions.

Communication Specifications
The controller acts as a terminal to the remote host PC. The controller communicates using the following settings:
- Synchronous mode: half duplex
- Baud rate: 115200
- Start bit: 1
- Data length: 8 bit (ASCII)
- Parity bit: None
- Stop bit: 1

Communication Sequence
The host machine initiates all communication sequences. The controller evaluates the last four characters in the command packet as the command.

Typical Command Packet: xxx CCCC
(where xxx is the setting and CCCC is the command)
The length of the setting varies depending on the command.

Serial Commands
Commands are evaluated after a return (Enter key or 0x0D hex). After a return is received, the controller evaluates the command, transmits any data related to the command, and closes the packet with <3.

The following tables provide the commands for the controller. Each entry includes a brief description of the command, shows the command format, and provides a description of the data that is attached and retrieved by the command.

NOTES:
- The <3 acknowledge command is removed from the examples since all commands are successfully evaluated.
- The return constant (Enter key: ↵) is depicted as [Enter] in all examples.

Appendix B, Touch XP Controller

The PICO® Touch™ XP (Extreme Precision) controller and PICO Pulse® XP jet valve apply the most exact fluid deposits, regardless of external factors that can affect deposit definition and repeatability. The system’s closed-loop capability monitors variables such as temperature and internal tolerances, allowing self-adjustment to minimize the production downtime needed to recalibrate the jetting system when external factors cause slight variations in repeatability. This is especially important for applications that require extremely precise, repeatable micro-deposits where strict tolerances or deposit definition must be met. The PICO Touch XP controller allows users to program stroke in microns for the finest parameter adjustments possible.

The differences between the Touch XP controller and the standard Touch controller include the following:

- A 5-pin VALVE power cable instead of a 3-pin cable
- A 6-pin VALVE communication cable instead of a 5-pin cable
- On the RAMP screen, STROKE is adjusted in microns (instead of the total percent of CLOSE VOLTS); the micron setting affects the tappet displacement. The ability to minutely adjust the tappet displacement contributes to the high deposit repeatability provided by the Touch XP controller.
- On the Touch XP VALVE screen only, the frequency indication displays under the cycle time.
Appendix B, *Touch XP Controller* (continued)

*Touch XP Operating Features*

**Touch XP Front Panel**

- **Settings screen icon**
- **Heaters screen icon**
- **Valve screen icon**
- **Wave parameters screen icon**

**Touchscreen**
- Cycle LED (clear or blue)
- Power LED (red or green)

**Touch XP Back Panel**

- **Power switch**

- **DC power input**
- **Ground terminal**
- **Valve power connection (5-pin)**
- **USB port (for PC communication)**
- **Nordson EFD use only**
- **I/O 2 port (includes RS-232 terminals)**
- **I/O 1 port**
- **Valve communication connection (6-pin)**
Appendix B, Touch XP Controller (continued)

**Touch XP VALVE Screen**

The VALVE screen is used to change the operating mode, enter valve dispensing parameters, and control valve power. On the Touch XP VALVE screen only, the frequency indication displays under the cycle time.

**NOTE:** For an explanation of all elements on the VALVE screen, refer to “VALVE Screen (Standard Touch Controller)” on page 24.
Appendix B, *Toµch XP Controller* (continued)

**Toµch XP WAVE PARAMETERS Screen**

The WAVE PARAMETERS screen is used to adjust the parameters of a wave profile in order to fine-tune the resulting material deposit. The graph on the screen provides a visual representation of a wave profile.

**NOTES:**

- On a *Toµch* XP controller, the STROKE value is set in microns.
- This screen is accessed in two ways: (1) by pressing the Wave Profile icon on the HOME screen or (2) by pressing the Wave Profile icon on the WAVE PROFILE screen.
- Wave profiles are enabled on the WAVE PROFILE screen. Refer to “WAVE PROFILE Screen” on page 27.

![Wave Parameters Screen on the Toµch XP Controller](image)

**Button** | **Description**
---|---
CLOSE VOLTS | Sets the voltage to close the valve. The higher the voltage, the greater the sealing force applied.
STROKE | Sets the tappet displacement in microns.  
**NOTE:** This parameter differs on the standard *Toµch* controller. Refer to “WAVE PARAMETERS Screen (Standard *Toµch* Controller)” on page 28.
OPEN | Sets how fast the valve opens. The range is valve-dependent, but typically 200–500 µs.
CLOSE | Sets how fast the valve closes. The range is valve-dependent, but typically 200–2,000 µs.

When pressed on this screen, the Wave Profile icon opens the WAVE PROFILE screen, on which you can select a different wave profile. Refer to “WAVE PROFILE Screen” on page 27 for details.
Appendix B, *Touch* XP Controller (continued)

**Routine Startup for a *Touch* XP and *Pulse* XP System**

1. Switch the *Touch* controller power ON.
   
   **NOTE:** Upon power on, the system automatically calibrates the *Pulse* XP valve.

2. If the process requires a heated valve, press the HEATERS icon and then press ON to switch the HEATERS mode to On.
   
   **NOTE:** Upon reboot, the controller remembers the last selected HEATERS mode.

3. Press the VALVE icon and then MODE until the touchscreen shows the desired operating mode.
Appendix B, *Touch XP Controller* (continued)

### Adjusting a Wave Profile on the *Touch XP* Controller

The WAVE PARAMETERS screen includes four adjustable settings that can be used to fine-tune the enabled Wave Profile.

**NOTE:** Custom profiles created before February 2020 cannot be edited.

1. On the HOME screen, press the WAVE PROFILE icon (�建). The WAVE PARAMETERS screen for the enabled wave profile opens.
   
   **NOTE:** To determine which wave profile is active, or to change the selected wave profile, refer to “Selecting a Wave Profile” on page 37.

2. On the WAVE PARAMETERS screen, make the desired adjustments to the following parameters:
   
   - **CLOSE VOLTS:** The voltage applied to close the valve. The higher the voltage, the greater the sealing force applied.
   - **STROKE:** The tappet displacement in microns.
   - **OPEN:** How fast the valve opens.
   - **CLOSE:** How fast the valve closes.
   
   **NOTE:** Minimum limits are valve-specific and will be updated by the controller if they are exceeded.

3. Press HOME to save the settings and return to the HOME screen.

---

Adjusting the STROKE setting of the enabled wave profile (*Touch XP* controller)
### Appendix B, *Touch* XP Controller (continued)

#### Alarm Code Troubleshooting on the *Touch* XP Controller

When an alarm occurs, the screen title bar blinks red and an alarm window appears. Refer to the table below for a list of system alarms unique to the *Touch* XP controller.

**NOTES:**
- Refer to “Clearing Alarms” on page 46 for additional information.
- The *Touch* XP controller also includes the alarms shown under “Alarm Code Troubleshooting” on page 49.

| b17      | 020           | FA Calibration Error        | • Fluid body assembly condition  
• Settings  
• Mechanical operation | Issue with fluid body assembly condition:  
• Ensure that the fluid body assembly is clean and free of deposits or residues.  
• Ensure that the tappet O-ring of the fluid body assembly is properly lubricated.  
• Test the operation with a different fluid body assembly to see if the alarm repeats. If the alarm persists, return the valve to Nordson EFD or to the vendor for service.  
CLOSE VOLTS setting too low:  
• Adjust the CLOSE VOLTS setting.  
Fluid body assembly not installed:  
• Install the fluid body assembly.  
Fluid assembly latch not closed fully:  
• Ensure that the heater body that houses the fluid body assembly is fully closed. |

**Touch XP Valve Extension Cables**

*NOTE:* The *Touch* XP controller requires different extension cables from the standard *Touch* controller. For standard *Touch* controller extension cables, refer to “Valve Extension Cables (Standard *Touch* Controller)” on page 47.

⚠️ **CAUTION**

Risk of equipment damage. The *Touch* XP controller does not accept extension cables designed for the standard *Touch* controller.

⚠️ **CAUTION**

Do not exceed the maximum extension cable length of 9 m (30 ft). Doing so will adversely affect communication between the valve and the controller.

*Includes one power cable and one communication cable
NORDSON EFD ONE YEAR LIMITED WARRANTY

This Nordson EFD product is warranted for one year from the date of purchase to be free from defects in material and workmanship (but not against damage caused by misuse, abrasion, corrosion, negligence, accident, faulty installation, or by dispensing material incompatible with equipment) when the equipment is installed and operated in accordance with factory recommendations and instructions.

Nordson EFD will repair or replace free of charge any defective part upon authorized return of the part prepaid to our factory during the warranty period. The only exceptions are those parts which normally wear and must be replaced routinely, such as, but not limited to, valve diaphragms, seals, valve heads, needles, and nozzles.

In no event shall any liability or obligation of Nordson EFD arising from this warranty exceed the purchase price of the equipment.

Before operation, the user shall determine the suitability of this product for its intended use, and the user assumes all risk and liability whatsoever in connection therewith. Nordson EFD makes no warranty of merchantability or fitness for a particular purpose. In no event shall Nordson EFD be liable for incidental or consequential damages.

This warranty is valid only when oil-free, clean, dry, filtered air is used, where applicable.
