

# Introducing BBconn Controls & BBconn Cloud

## Built for Connectivity - Designed for the Future

## Designed to Improve Your Operations

### Simple to Use

Nordson's new BBconn control system makes the ProBlue Flex melter easy to learn and easy to operate. The intuitive, multi-language user interface eliminates the need for extensive operator training. Extensive diagnostics, explained in clear language, ensures maximum up-time. The many user-interface options give you the flexibility to design the system around your operation.

- Multi-line OLED/touchpad user interface
- Flexible password protection scheme
- Wireless operation via phone or tablet
- Remotely mounted Touchscreen
- Operate via the parent machine PLC

### Easy to Integrate

The ProBlue Flex is thoughtfully designed to fit into any operation. Total mounting flexibility is granted by using an automated filling system, electronic pressure setting, and one of the many remote user interface options. Complete integration leads to a safer operation by eliminating the need for daily operator interaction with the system.

- Integrated Industrial Ethernet options (Ethernet IP and Profinet)
- Additional protocols supported via plug-in cards
- Multiple remote system I/O options
- Remote user interface options
- Remote pressure setting options

### Total Process Control

Together, BBconn Controls and BBconn Cloud provide you with the tools you need to continuously monitor and improve your production processes.

- Add the Adhesive Tracking System via easy plug-and-play upgrade
- Expansive system event log captures all alarms and setting changes
- Archive settings, recipes and event history using the BBconn Cloud
- Enhanced equipment support is available using the remote maintenance features of BBconn Cloud
- Advanced reporting and machine analytics
